Submitted (JAN-1996) to the EMBL/GenBank/DDBJ databases.

-!- FUNCTION: RECEPTOR TO INTERLEUKIN-8, WHICH IS A POWERFUL.

- REUTROPHILS CHEMOTACTIC FACTOR. BINDING OF IL-8 TO THE RECEPTOR CAUSES ACTIVATION OF NEUTROPHILS. THIS RESPONSE IS MEDIATED VIA A G-PROTEIN THAT ACTIVATE A PHOSPHATIDYLINOSITOL-CALCIUM SECOND MESSENGER SYSTEM. THIS RECEPTOR BINDS TO IL-8 WITH A HIGH AFFINITY AND TO GRO/MGSA AND NAP-2 ALSO WITH A HIGH AFFINITY (BY
                                                                                                                                                                                                                                                                                                                                                                  Gaps
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                              -!- SUBCELLULAR LOCATION: Integral membrane protein.
-!- SIMILARITY: BELONGS TO FAMILY 1 OF G-PROTEIN COUPLED RECEPTORS.

Complete amino-acid sequence of subunit a of Eurypelma californicum hemocyanin."; Biol. Chem. Hoppe-Seyler 371:557-565 (1990).
-!- FUNCTION: HEMOCYANINS ARE COPPER-CONTAINING OXYGEN CARRIERS OCCURRING FREELY DISSOLVED IN THE HEMOLYMPH OF MANY MOLLUSKS AND
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                ATTHEORDE.

-I-SUBUNIT: TARANTULA HEMOCYANIN IS A 24-CHAIN POLYMER WITH SEVEN
DIFFERENT CHAINS IDENTIFIED.
-I-SUBCELLULAR LOCATION: Extracellular.
-I-SUBSUE SPECIFICITY: Hemolymph.
-I-MISCELLANBOUS: THE TWO COPPER IONS BOUND EACH HAVE 3 NITROGEN
LIGANDS (PRESUMABLY CONTRIBUTED BY HIS RESIDUES) AND SHARE A
BRIDGING LIGAND (POSSIBLY CONTRIBUTED BY A TYR RESIDUE) IN
ADDITION TO BINDING OXYGEN.
-I-SIMILARITY: BELONGS TO THE TYROSINASE FAMILY. HEMOCYANIN
SUBFAMILY.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                             SECUENCE FROM N.A.

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                               whose sequence is based in part on residues 42-50 of human cancer antigen ATF4/CREB-2 (not defined) and the polynucleotides encoding them. Also included are an antibody that specifically recognises and binds the compound, a method for inducing an immune response in a subject by delivering the compound, a method of immunotherapy comprising and immune ference and at the expense of an antised in vitro or in vivo in the presence and at the expense of an antigen presenting cell that presents the immunogenic compound in the context of an MHC (major histocompatibility complex) molecule and a method of adoptive immunotherapy comprising administering the immune effector cell. The compounds are useful for modulating an immune response to the synthetic and naturally occurring compounds. The compounds are useful for treating cancer, particularly ovacines. The compounds are useful for treating cancer, particularly covarian cancer. The compounds are also useful for generating antibodies that specifically recognise and bind to these molecules. These antibodies are further useful for immunotherapy when administered to a subject. The peptides, polypeptides and polynucleotides are useful in diagnostic methods, for the detection and purification of antibodies, cor as immunogents a human cancer antigen ATF4/CMFR-2 has antipodies.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                     ö
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                     Human; cancer antigen; ATF4; CREB-2; vaccine; cytostatic; immunogenic ligand; gene therapy; MHC; major histocompatibility complex; adoptive immunotherapy; cancer; ovarian cancer.

The present
sequence represents a human cancer antigen ATF4/CREB-2 based immunogenic
                                                                                                                                                                                                                                                                                                                                                                                                                                                  respectively
New therapeutic compounds comprising immunogenic ligands, useful for modulating an immune response, particularly for treating ovarian cancer, and as components of anticancer vaccines
                                                                                                                                                                                                                                                                                                                                                                                                                                 Note: Immunogenic ligands AAU74681-AAU74686 are stated to be encoded by the degenerate DNA sequences AAS20120-AAS20125 respective) but have not been cross-referenced or CDS features put in due to the degeneracy of the DNA sequences.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                     Gaps
                                                                                     The invention relates to compounds comprising an immunogenic ligand
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                     ;
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                            Human cancer antigen ATF4/CRBB-2 based immunogenic ligand #3.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                    100.0%; Score 64; DB 23; Length 9; ilarity 100.0%; Pred. The invention relates to compounds comprising an immunogenic ligand whose sequence is based in part on residues 42-50 of human cancer antigen ATF4(TRBE-2 (not defined) and the polyvucleotides encoding them. Also included are an antibody that specifically recognises and binds the compound, a method for inducing an immune response in a subject by delivering the compound, a method of immunotherapy comprising the compound, a method of immunotherapy comprising the compound and the presence and at the expense of an attigen presenting cell that presents the immunogenic compound in the context of an MHC (major histocompatibility complex) molecule and a method of adoptive immunotherapy comprising administering the immune response context of an MHC (major histocompatibility complex) molecule and a method of adoptive immunotherapy comprising administering the immune response to the synthetic and naturally occurring compounds. The compounds are useful for modulating an immune response covarian cancer. The compounds are useful for treating cancer, particularly covarian cancer. The compounds are also useful for generating antibodies that specifically recognise and bind to these molecules. These compounds continued to the semilation of antibodies are useful in diagnostic methods, for the detection and purification of antibodies. The sequence represents a human cancer antigen ATF4(CRB-2 based immunogenic invarian the present
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                  ö
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                     Note: Immunogenic ligands AAU74681-AAU74686 are stated to be encoded by the degenerate DNA sequences AAS20120-AAS20125 respectively but have not been cross-referenced or CDS features put in due to the degeneracy of the DNA sequences.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                  Human; vaccination; gene therapy; nutritional supplement; stem cell proliferation; haematopoiesis; nerve tissue regeneration; immune suppression; immune stimulation; anti-inflammatory; leukaemia.
                                                                                                                                       New therapeutic compounds comprising immunogenic ligands, useful for modulating an immune response, particularly for treating ovarian cancer, and as components of anticancer vaccines
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                  Gaps
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                  ..

The invention relates to an isolated nucleic acid detection reagent capable of detecting 1000 or more genes from Drosophila. The invention is useful in developmental biology and in elucidating cell signalling and cell-cell interactions in higher enkaryotes for the development of insecticides, therapeutics and pharmaceutical drugs. The invention discloses genomic DNA sequences (ABL16176-ABL30511), expressed DNA sequences (ABL01640-ABL16175) and the encoded proteins
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                              immunomodulatory, cytostatic; neuroprotective; vulnerary; nootropic; anticonvulsant; antiarthritic; cerebroprotective; antifungal; antiviral; antibacterial; antiallergic; dermatological; haemostatic; antiaethmatic; thrombolytic; immunogen; antibody; gene therapy; neurological disorder; Parkinson's disease; inflammatory disorder; cancer; asthma; osteoporosis; tissue regeneration; immune disorder.
                                                                                                                                                                                                                                                                                                    The sequence data for this patent did not form part of the printed specification, but was obtained in electronic format directly from WIPO at ftp.wipo.int/pub/published_pct_sequences.
genes from Drosophila and for elucidating cell signalling and cell-cell
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                  Isolated polypeptides useful for treating anti-inflammatory diseases, nervous system disorders, and for regenerating bone and cartilage -
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                             Human; novel protein; Antianaemic; osteopathic; antiinflammatory;

                                                                                                                                                                                                                                                                                           LINCALIDED ACALGES TO MOVEL HUMBAN SCLEECE POLYPEPTIGES. THE POLYPEPTIGES and antibodies to the polypeptides are useful for determining the presence of or predisposition to a disease associated with altered levels of polypeptide. The polypeptides are also useful for identifying agents (agonists and antagonists) that bind to them. Cells expressing the proteins are useful for identifying a therapeutic agent for use in treatment of a pathology related to aberrant expression or physological interactions of the polypeptide. Vectors comprising the mucleic acids encoding the polypeptides and cells genetically engineered to express them are also useful for producing the proteins. The proteins are useful in genetic vaccination, testing and cells proteins. They and can be used as nutritional supplements. They may be used to increase stem cell proliferation; to regulate haematopolesis, and in bone, cartilage, tendon and/or nerve tissue growth or regeneration; immune suppression and/or nerve tissue growth or regeneration; in treatment of leukaemias. AAU25510-AAU33304 represent the amino acid in sequences of novel human secreted proteins of the invention.

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                  Drosophila melanogaster polypeptide SEQ ID NO 183.
```

The invention relates to polynucleotides encoding novel human proteins or their active domains. The polypeptides, polynucleotides and antibodies raised against the polypeptides are used in a method of treatment of a mammal and prevention of disorders caused by the aberrant protein expression or activity. The polypeptides can be used as

Example 4; Page 522-523; 894pp; English.

insecticides, therapeutics and pharmaceutical drugs. The invention

```
molecular weight markers, food supplements, and in antibody production.

The polypeptides are used to identify compounds which bind to the polypeptides. Polymucleotides of the invention are used as probes and primers, for sequencing, for chromosome or gene mapping, in the production of recombinant proteins, and in generating anti-sense DNA or production of recombinant proteins, and in generating anti-sense DNA or target drugs to a tumour, in assays to determine biological activity, to raise antibodies/elicit an immune response, to determine quantitative protein levels, as tissue markers, and to isolate receptors or ligands. Colypeptides of the invention may also be useful in treating platelet disorders, stem cell disorders, regenerating bone, cartilage, tendon, cligament and/or nerve tissue, wound healing, treating burns, promoting contraceptive, treating osteoporosis and osteoarthritis, anemaia, contraceptive, treating osteoporosis and osteoarthritis, anemaia, alleration or from autoinmunity, cancer, alleray, asthma, clungal infection or from attoinmunity, cancer, alleray, asthma, cantillammatory diseases, nervous system disorders, and infection.
                                                                                                                                                                                                                                                                                                                                                                                                                                                               ó
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                    The invention relates to an isolated nucleic acid detection reagent capable of detecting 1000 or more genes from Drosophila. The invention is useful in developmental biology and in elucidating cell signalling and cell-cell interactions in higher eukaryotes for the development of

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                 1.5
                                                      The sequence data for this patent did not form part of the printed specification, but was obtained in electronic format directly from WIPO at ftp.wipo.int/pub/published_pct_sequences.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                         The sequence data for this patent did not form part of the printed specification, but was obtained in electronic format directly from WIPO
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                      New isolated nucleic acid detection reagent for detecting 1000 or more genes from Drosophila and for elucidating cell signalling and cell-cell
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                               The invention relates to an isolated nucleic acid detection reagent capable of detecting 1000 or more genes from Drosophila. The invention useful in developmental biology and in elucidating cell signalling and cell-cell interactions in higher eukaryotes for the development of insecticides, therapeutics and pharmaceutical drugs. The invention discloses genomic DNA sequences (ABL16176-ABL30511), expressed DNA sequences (ABL01875) and the encoded proteins
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                   Gaps
                                                                                                                                                                                Gaps
         discloses genomic DNA sequences (ABL16176-ABL30511), expressed DNA sequences (ABL01840-ABL16175) and the encoded proteins (ABB57737-ABB72072).

This protein is a prophenol oxidase derived from a domestic silkworm. The phenol oxidase may be used as a novel labelling oxidase. The cludidation of the primary structure of the prophenol oxidase will contribute to the reconstitution of a prophenol oxidase activation system which can be applied to the detection of microorganisms by measurement of beta-1,3-glucan and peptide glycan.
            oxidase; prophenol; phenol; domestic silkworm; label; detection
                                                                                                                                                                                                                                                                                                                                                              (Pro)phenol oxidase derived from a domestic silkworm - useful labelling oxidase and in pro-phenol oxidase activation system detection of microorganisms

                                                                                                                                                                                                  The invention relates to antisense inhibitors of genes essential to prokaryotic cellular proliferation, their use in identifying the genes, their use in the discovery of novel antibiotics, the essential genes themselves and the encoded proteins. The prokaryotes used are secherichia coli, Staphylococcus almonella typhi, Klebsiella pneumoniae, Pseudomonnas aeruginosa and Bnterococcus facealis. The invention is also useful for the identification of potential new targets for antibiotic development. The antisense nucleic acids can also be used to identify proteins used in proliferation, to express these proteins, and to obtain antibodies capable of binding to the expressed proteins. The proteins can be used to screen compounds in rational drug discovery programmes. The antisense nucleic acid sequence is also useful to screen of for homologous nucleic acids which are required for cell proliferation in a wide variety of organisms. The present sequence represents an essential prokaryotic cellular proliferation protein.

Con the printed specification, but was obtained in electronic form part directly from MIPO at

The invention relates to antisense inhibitors of genes essential to prokaryotic cellular proliferation, their use in identifying the genes, their use in their use in identifying the CC genes, their use in the discovery of novel antibiotics, the essential genes their between the encoded proteins. The prokaryotes used are Escherichia coli, Staphylococcus aureus, Salmonella typhi, Klebsiella CC genemoniae, Pseudomonas aeruginosa and Enterococcus facefalis. The invention is also useful for the identification of potential new targets for antibiotic development. The antisense nucleic acids can also be used to invention antibodies capable of binding to the expressed proteins. The proteins can be used to screen compounds in rational drug discovery programmes. The antisense nucleic acid sequence is also useful to screen for homologous nucleic acids which are required for cell proliferation in a wide variety of organisms. The protein compounds in required for cell proliferation in can wide variety of organisms. The protein sequence data for this patent did not form part of the printed specification, but was obtained in electronic format directly from WIPO at
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                  epidermidis; open reading frame; ORF; bacterial infection;
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                            Gaps

The invention relates to a protein (ABP25413-ABP30895) from group B streptococcus/GBS (Streptococcus agalactiae) or group A streptococcus/GBS (Streptococcus agalactiae) or group A streptococcus/GBS (Streptococcus pyogenee), comparising one of 5481 sequences (S1), given in the specification. The proteins have antibacterial and antiinflammatory activity. (I), nucleic acids encoding (I), ABN66044-ABN71526 and antibodies that bind (I) are used in the manufacture of medicaments for the treatment or prevention of infection or disease caused by Streptococcus bacteria, particularly S. agalactiae and S. pyrogenes. Nucleic acids encoding (I) are used to detect Streptococcus in a compound binds to (I). A composition comprising (I) or a nucleic acid encoding (I), may be used as a vaccine or diagnostic composition. The disease caused by Streptococcus that is prevented or treated may be meningitis. Nucleic acid encoding (I) may be used to recombinantly produce (I) and may be used in gene therapy. Antibodies to (I) are used for affinity chromosome processes and distinguishing/identifying
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                           The invention relates to isolated polynucleotide (I) and polypeptide (II) sequences. (I) is useful as hybridisation probes, polymerase chain reaction (PCR) primers, oligomers, and for chromosome
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                           Human; chromosome mapping; gene mapping; gene therapy; forensic; food supplement; medical imaging; diagnostic; genetic disorder.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                     New isolated polynucleotide and encoded polypeptides, useful in diagnostics, forensics, gene mapping, identification of mutation responsible for genetic disorders or other traits and to assess
                                                                                                                                                                                                                                                                                                                                                                                            DB 23; Length 235;
                                                                                                                                                                                                                                                                                                                                                                                                                              ö

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                          Streptococcus, GAS, GBS, group B streptococcus, Streptococcus agalactiae, group A streptococcus, Streptococcus pyogenes, antibacterial, antinflammatory; infection, vaccine, meningitis, gene therapy.
                                                                                                                                                                                              ABN90538 to ABN93374 represent Staphylococcus epidermidis open reading frame (ORF) nucleic acid sequences which encode the amino acid sequences given in ABP35124 to ABP37960. The S. epidermidis sequences have antibacterial activity and can be used in gene therapy. The sequences can also be used in the diagnosis and treatment of bacterial infections, particularly S. epidermidis infections. The sequences can be used to screen for compounds able to interfere with the S. epidermidis life cycle or inhibit S. epidermidis infection.

N.B. The sequence data for this patent did not form part of the printed specification, but was obtained in electronic format directly from the
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                         New Streptococcus protein for the treatment or prevention of infection or disease caused by Streptococcus bacteria, such as meningitis, and for detecting a compound that binds to the protein -
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                Gaps
                                                                                                                Novel isolated nucleic acid encoding a Staphylococcus epidermidis polypeptide, useful for diagnosing and treating bacterial infections
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                ö

conditions and in recombinant production of (II). The polymucleotides are also used in diagnostics as expressed sequence tags confidentifying expressed genes. (I) is useful in gene therapy techniques to restore normal activity of (II) or to treat disease states involving confidence of (II). (II) is useful for generating antibodies against it, detecting or quantitating a polypeptide in tissue, as molecular weight markers and as a food supplement. (II) and its binding partners are useful in medical imaging of sites expressing (II). (I) and (II) are useful in medical imaging of sites expressing (II). (I) and (II) are useful for treating clasorates involving aberrant protein expression or biological activity. The polypeptide and polymucleotide sequences have applications in claspostics, forensics, gene mapping, identification of mutations responsible for genetic disorders or other traits to assess biodiversity and to produce other types of data and products dependent on DNA and diagnostic amino acid sequences of data and products dependent on DNA and diagnostic amino acid sequences of the invention.

Specification, but was obtained in electronic format directly from WIPO
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                          at ftp.wipo.int/pub/published_pct_sequences

drug screening or development, for developing yeast strains with better secretion yield of protein, or in gene therapy (e.g. to treat Candida infection or cancer) New protein-protein complexes of Saccharomyces cerevisiae, useful in

Claim 6; Page 71; 357pp; English.

The present invention relates to complexes between Saccharomyces cerevisiae Selected Interacting Domain (SID (RTM)) proteins and coding sequences. The protein complexes of S. cerevisiae are useful in drug development, in screening drugs or agents that modulate the interaction of proteins, for developing yeast strains with better secretion yield of

protein, and in gene therapy. The protein complexes, polypeptides and polymucleotides are useful for preventing or treating Candida infection, cancer or neurodegenerative diseases in humans or animals. The present sequence is a protein of the invention. 88888

No. is the number of results predicted by chance to have a score greater than or equal to the score of the result being printed, and is derived by analysis of the total score distribution.

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                Sequence 2, Application US/08645971
| Patent No. 5763385
| GENERAL INFORMATION: Application US/08645971
| TITLE OF INVENTION: Modified Alpha-Amylases Having Altered TITLE OF INVENTION: Calcium Binding Properties NUMBER OF SEQUENCES: 5
| COMPUTER READABLE FORM: MEDIUM TYPE: Floppy disk COMPUTER PREADABLE FORM: MEDIUM TYPE: Ploppy disk COMPUTER PREADABLE FORM: MEDIUM TYPE: Ploppy disk COMPUTER PREADABLE FORM: MEDIUM TYPE: Ploppy disk COMPUTER PREADABLE FORM: APPLICATION DATA: APPLICATION DATA: APPLICATION NUMBER: US/08/645,971
| INFORMATION FOR SEQ ID NO: 2: SEQUENCE CHARACTERISTICS: LENGTH: 483 amino acids TYPE: Application No. 2: APPLICATION DATA: APPLICATION NUMBER US/08/645,971
| TYPE: Amino acids TYPE:
                                                                                                                                                                                                                                                                                                                             CUNTY: SCA.

STATE: CA

CUNTRY: USA

ZIP: 94000

COMPUTER: BEDABLE FORM:
MEDIUM TYPE: Floppy disk
COMPUTER: IBM PC Compatible
CORPATING SYSTEM: PC-DOS/MS-DOS
SOFTWARE: PATENTIN Release #1.0, Version #1.25 (EPO)
CURRENT APPLICATION DATA:
APPLICATION NUMBER: US/08/468,700
FILING DATE: 06-JUN-1995
CLASSIFICATION: 25-2
ATTORNEY/AGENT INFORMATION:
NAME: Stone, Christopher
REGISTRATION NUMBER: 35,696
REFERENCE/DOCKET NUMBER: 37,42-7555
TELEPAX: (415) 742-7555
TELEPAX: (415) 742-7217
INFORMATION FOR SEQ ID NO: 34:
SEQUENCE CHARACTERISTICS:
LENGTH: 483 amino acids
TTELEPAX: anino acids
TTELEPAX: SEQUENCE CHARACTERISTICS:
LENGTH: 483 amino acids
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                            65.6%; Score 42; DB 1; Length 483; 100.0%; Pred. No. is the number of results predicted by chance to have a score greater than or equal to the score of the result being printed, and is derived by analysis of the total score distribution.

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                    alpha-amylase (EC 3.2.1.1) precursor - Bacillus amyloliquefaciens
N'Alternate names: 1,4-alpha-D-glucan glucanohydrolase
C;Species: Bacillus amyloliquefaciens
C;Species: Bacillus amyloliquefaciens
C;Accession: A92389; A90307; Ī39756; I39763; A00843
R;Takkinen, K.; Pettersson, R.F.; Kalkkinen, N.; Palva, I.; Soderlund, H.; Kaariainen, I. Biol. Chem. 258, 1007-1013, 1983
A;Title: Amino acid sequence of alpha-amylase from Bacillus amyloliquefaciens deduced fr A;Reference number: A92389; MUID:83108808; PMID:6185474
A, Molecule type: DNA
A, Residues: 1-29 < LAO>
